

TECH-TASMEEM

COLLABORATION ARD TECHLAB – FANTASMEEM

The **ArD TechLab**, the Digital Fabrication Unit at AUB (Department of Architecture and Design, MSFEA), and **FANTASMEEM**, the design-related project of the Goethe-Institut Libanon are launching the collaboration **TECH-TASMEEM** in order to support the design community in Lebanon. In times of high uncertainty and volatility, the collaboration aims at supporting designers to thrive in Lebanon on two levels:

- providing access to the **ArD TechLab** to designers who are part of the **FANTASMEEM** network for them to prototype their products and enhance their digital fabrication skills;
- offering specialized workshops on-site at **ArD TechLab** for the **FANTASMEEM** network or with **FANTASMEEM** designers for AUB students to share knowledge and expertise.

As an advanced fabrication and research unit focusing on the integration of new digital technologies with design research and innovation, the **ArD TechLab** opens its doors to **FANTASMEEM**'s alumni, grantees, and its network who would like to use advanced tools and machines for digital design and fabrication. Designers who took part in **FANTASMEEM**'s various activities such as training programs, workshops, grant programs or else, are welcome to use the Lab and enhance their digital fabrication skills through use of the available machines as well as workshops.

By joining forces through the joint collaboration **TECH-TASMEEM**, **ArD TechLab** and **FANTASMEEM** are contributing to strengthening the support structures for the design scene in Lebanon, and are providing means for designers to keep on thriving and enhancing their skills.
