Faculty: Nature (Natur)

Lecture: Spider Web (Spinnennetz)

Worksheet Spider web (Spinnennetz)

How do spiders spin their webs? Match the text to the pictures.

Now the spider builds a spiral. It spins threads first from inside to outside, then again from outside to inside.

Then the spider goes to the other side and attaches the thread there, too.

Then it climbs into the middle and guides the thread down.

Then the spider spins the spoke threads. They have this name because they look like the spokes on a bicycle.

The spider first attaches the thread to the top of a branch.

The web is finished after about an hour.

Now the framework for the web is finished.

Faculty: Nature (Natur)

Lecture: Spider Web (Spinnennetz)

Answer key *Spider web* (Spinnennetz)

- **1**. The spider first attaches the thread to the top of a branch.
- **3.** Then it climbs into the middle and guides the thread down.
- **5.** Then the spider spins the spoke threads. They have this name because they look like the spokes on a bicycle.

- **2.** Then the spider goes to the other side and attaches the thread there, too.
- **4.** Now the framework for the web is finished.
- **6.** Now the spider builds a spiral. It spins threads first from inside to outside, then again from outside to inside.
- 7. The web is finished after about an hour.
