

Closing workshop

"UPSCALING OF SUSTAINABLE FOREST MANAGEMENT AND CERTIFICATION IN VIET NAM"

Over the past four years, the "**Upscaling of Sustainable Forest Management and Certification in Viet Nam**" (SFM) project has made significant progress promoting sustainable, climate-friendly forest management practices. These practices aim to advance the transition from short to long-rotation plantations while strengthening social safeguards and increasing forest certification areas and forest carbon potential.

As the project draws to a close, the workshop aims to highlight SFM's achievements, share lessons learned, and ensure the long-term impact and upscaling of sustainable forest management.

8 August 2025

Quy Nhon, Gia Lai province

WHAT TO EXPECT

- ✓ **Presentation of key project results and impacts;**
- ✓ **Sharing of plans** to sustain and scale up the project's results and models;
- ✓ **Recognition of contributions** from project partners and stakeholders;
- ✓ **Field visit to a silvicultural demonstration plot** showcasing a sawlog acacia plantation and the results of innovative silvicultural practices implemented under the project.

WHO WILL JOIN
