

# BUILDING BRIDGES - BRÜCKENBAU

## TEIL 5 - KLIMAWISSENSCHAFT

**Task:** This unit could be put in the hands of students of science.

The materials on offer are a short film interview in German about the measurements Dave Lowe and others made over 50 years, a transcript of the interview and two power point presentations - one in German and one in English - on the science behind climate change.

The science experts in the German class could show the film to their fellow students and research and explain any queries. They could also use the PPP in German to explain concepts to the German class, and the English version in their science class.
